Vedas in Modern World

The study highlights recurring glyph clusters on seals—appearing at the start, middle, end, or in isolation—often paired with other repeating forms. While their function has been unclear, *Yajñadeva*'s phonetic assignments yield coherent Sanskrit words, offering interpretative potential. This paper tries to find a place called Magan in Indus Valley Civilization seals and its related people. Focusing on 48 seals, the research proposes that glyphs read as *Moka/Maka*—*Prākṛta* forms of *Makran*—and their variants *Mokana* and *Mokanī* represent geographic names like *Oman*, *Makran*, and *Magan*-linked regions. These may have denoted ancient transshipment ports or entrepôts. The suffixes -ana and -anī, serving as plural markers in both Sumerian and Sanskrit, suggest a wider linguistic continuum.
